

 CLIQ™

ABLOY® PROTEC²

Double-checked access control
for hospitals and healthcare

BASED ON MECHANICAL AND ELECTRONIC IDENTIFICATION, **ABLOY® PROTEC² CLIQ** IS AN EASY-TO-USE AND FLEXIBLE ACCESS CONTROL SYSTEM. ITS DOUBLE TECHNOLOGY MEANS THAT THE SAFETY AND SECURITY OF YOUR OPERATIONS IS DOUBLE-CHECKED.

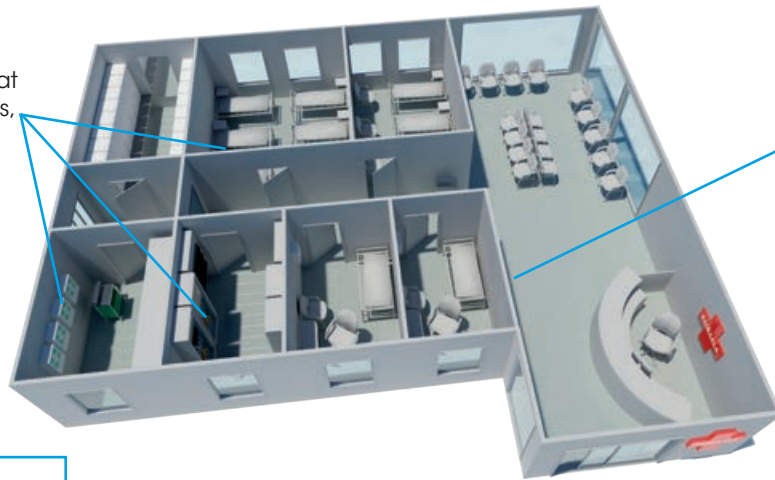

TYPICAL CHALLENGES IN ACCESS CONTROL

Many people work in healthcare services, whether permanently employed, temporary employed or external parties. Therefore, any means of storing medical supplies securely, saving nurses time finding medicine cabinet keys and ensuring the safety of the patients' possessions are welcome. As it stands, key management is difficult, because the number of users changes constantly. In addition, access control should make work easier for the personnel, not more difficult.

THE ABLOY® PROTEC² CLIQ SOLUTION

ABLOY® PROTEC² CLIQ system is installed for items that require particular applications, such as medicine cabinets and trolleys and the storage cabinets for the patients' possessions.

Access rights can be updated at any time through the wall unit in the corridor.

The flexibly adjustable access rights, based on calendar and time of a day, are stored in the key, so the user needs only one key.

ADVANTAGES

- No more need to spend time looking for the person holding the keys to medicine cabinets.
- Time saved leads to reduced costs and more efficient ward and hospital management.
- Reduce losses of medicines and drugs, as all visits to the medicine cabinets are available in the audit trail.
- Staff need only one key to access secure areas and cabinets.
- Time-based access rights mean staff have access only when they need it.
- Easy, secure remote key management improves cost-efficiency with real-time updates and multiple hospitals can be covered.
- Key losses are reduced, as users are more careful with their personal key.
- New keys can be added to the system quickly and easily, with hassle-free removal of lost keys.
